

PRESS RELEASE

VisuCard® from Galitt, first PVT confirmed by Visa for the latest personalization specifications

Boulogne Billancourt (France), February 3rd, 2014

Galitt is proud to announce that VisuCard® GPVT, its Global Card Personalization Validation Tool, is the first to obtain Visa confirmation with respect to its compliance with the “Global Chip Card Personalization Validation Requirements (GCCPVR)” version 2.1.1.

Visa recently issued the latest version of its “Global Chip Card Personalization Validation Requirements (GCCPVR)”, called version 2.1.1, which allows to validate the correct personalization of contact and contactless cards as well as mobile devices according to “Visa Mobile Contactless Payment Specification (VMCPS)”. With this evolution, the NFC (Near Field Communication) ecosystem becomes more complete as the same tests are performed for payment applications in handsets and for cards.

Based on Visa Global Chip Card Personalization Validation Requirements (GCCPVR), Galitt has updated VisuCard® GPVT, its Global Card Personalization Validation Tool, to reflect these evolutions. The new version of Galitt tool has been presented to Visa, which just confirmed that Galitt’s VisuCard® is the first to allow card and mobile personalization validation according to GCCPVR version 2.1.1.

“We are proud to be the first to obtain Visa confirmation that Galitt VisuCard® GPVT complies with their new version of the specification, which includes mobile phones for the first time. This confirmation demonstrates both the quality of Galitt tools and the close relation we have with Visa,” declares Vincent Mesnier, Director of Integration Services at Galitt.

VisuCard® GPVT allows card issuers, personalization bureaus, and more globally all stakeholders in the payment card environment to validate the cards and mobile phone applications personalization prior to issuance. The tool allows to check all types of Visa-branded cards and applications issued in the world. Recognized for its user-friendliness and ease of use, VisuCard® GPVT provides an automatic recognition of the card to be analyzed, a validation rule editor, a card profile creation tool that allows the importation of Visa VPA profiles and an exhaustive control in case of multi-interface and multi-application cards, a verification of the card keys and handling of issuer’s scripts. VisuCard® GPVT delivers automatic reports in order to facilitate the test procedures.

About Galitt (www.Galitt.com) – For more than 20 years, Galitt has been offering consulting and services in payment systems and secure electronic transactions. Regarding consulting and assistance, Galitt is providing its customers with services from strategic choices to system implementation via system design and support: business consulting, EFT business analysis and expertise, audit and security, design, specification & project management, acceptance testing, technical assistance and development, training. Engineering and technology activities are covering bespoke development, software integration, turnkey solutions, hosted solutions and testing software.
