Cryptography: Galitt reinforces its expertise in innovative solutions

Boulogne-Billancourt (France), March 5th, 2012

In an ever more interconnected world, very sensitive applications are becoming more and more the targets of sophisticated attacks. Whether they are used in banks, healthcare, transportation or public services... those sensitive applications are equipped with highly secure cryptographic modules used to protect cryptographic keys and related computations. One of the most used modules in the world is the IBM cryptographic coprocessor.

For more than ten years, Galitt has designed and developed highly secure solutions, which run on different products of the IBM cryptographic coprocessor range in following fields of payment systems, banking, healthcare, transportation, public services, etc. Today, Galitt, the specialist in applied cryptography, has the expertise and tools to support its clients in the implementation of new cryptographic solutions. Its experts especially suggest the migration of existing solutions to the latest IBM HSM: the 4765 coprocessor. This cryptographic module is one of the most efficient and secure modules available. The IBM 4765 Cryptographic Security Module has been validated according to FIPS 140-2, Overall Level 4 (highest level of security).

Galitt can develop either embedded “firmware” or applications, using the most sophisticated cryptographic functionalities.

Jean-Michel MAMANN, Executive Director-Engineering and Technology, declared: “Galitt once again shows its long-time commitment in this business area where the market is continuously looking for long-term expertise, innovation and assistance.”

Hervé AMMEUX, Security Expert at Galitt, added: “Galitt is one of the rarest companies in Europe to be able to develop cryptographic software embedded into the 4765 coprocessors and to implement a full cryptographic system for a client. Moreover, Galitt is one of the few companies that are qualified to develop embedded firmware for payment systems. Our solutions dedicated to the banking system are verified by PayCert (www.paycert.eu).”

About Galitt (www.Galitt.com) – For more than 20 years, Galitt has been offering consulting and services in payment systems and secure electronic transactions. Regarding consulting and assistance, Galitt is providing its customers with services from strategic choices to system implementation via system design and support: business consulting, EFT business analysis and expertise, audit and security, design, specification & project management, acceptance testing, technical assistance and development, training. Engineering and technology activities are covering bespoke development, software integration, turnkey solutions, hosted solutions and testing software. Galitt indeed offers petrol and loyalty card solutions (Catti™), simulators (KaNest®), personalization validation tools (VisuCard®) and added-value solutions (VisuBank®, private labels...).

Being the reference in payment systems and electronic transactions, Galitt is the leader in France in all its businesses, and a worldwide leader in providing test tools and expertise in payment innovation.
